Louisiana is at the cusp of a growing technology sector, which has a direct impact of \$5.3 billion on its economy. Cleco Power's resilient, reliable and affordable power grid has available capacity at six development-ready sites across the state, with a capacity range of 100MW to 450MW. Additionally, Cleco's Dolet Hills Solar Facility will have 240MW of green, renewable power available in 2027. Cleco's service territory is ideal for data centers looking for sites with power redundancy, water supply and fiber availability. Through Louisiana's \$1.4 billion broadband federal funding, every community or technical college in the state has access to fiber optic training programs.

SPOTLIGHT ON SITES

Progress Point and Acadiana Regional Airport

This 45-acre site is located in Iberia Parish, just off of Highway 90 and five miles from the Acadiana Regional Airport in the Lafayette metro region, which also offers seven additional sites varying from 50 to 200 acres.

Beauregard Airport Industrial Site

This 1,188-acre site is a shovel-ready certified site located in Cleco's Western Louisiana region. It is adjacent to the Beauregard Regional Airport and minutes away from three major highways.
